The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence ad	dress			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- a. Group I (claims 2-17) is directed to an apparatus for determining a distribution of particle characteristics in which light from the reflector is combined with light scattered from said particles to produce an interference signal (classified in class 356 and subclass 450).
- b. Group II (claim 18) is directed to a method for correcting a power spectrum of a signal from a scatter detector, to remove a portion of said power spectrum which is not caused by scatter from particles of interest (classified in class 345 and subclass 337).
- c. Group III (claim 19) is directed to a method for correcting a power spectrum of a signal from a scatter detector, with an interference signal derived from light which is scattered from moving particles (classified in class 356 and subclass 450).
- 2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I is directed to an apparatus for determining a distribution of particle characteristics whereas Group II is directed to a method for correcting a power spectrum of a signal from a scatter detector. They are two distinct inventions, one of

Art Unit: 2886

which is method, and the other an apparatus that may be used for implementing said method. However, said method does not need said apparatus for implementing the claimed method.

- 3. The inventions listed as Groups II and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group II is directed to a method for correcting a power spectrum of a signal by detecting scattered light from particles whereas Group III is directed to a method for correcting a power spectrum of a signal by detecting interference signal from at least one particle. They are two distinct inventions having entirely different method-steps for obtaining a desired result.
- 4. The inventions listed as Groups I and III do not relate to a single general inventive. concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I is directed to an apparatus for determining a distribution of particle characteristics whereas Group III is directed to a method for correcting a power spectrum of a signal by detecting interference signal from at least one particle. They are two distinct inventions, one of which is method, and the other an apparatus that may be used for implementing said method. However, said method does not need said apparatus for implementing the claimed method.
- 5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not

Application/Control Number: 10/599,737 Page 4

Art Unit: 2886

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Contact/Status Information

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Roy M. Punnoose** whose telephone number is **(571)272-2427**. The examiner can normally be reached on 9:30 AM - 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Tarifur R. Chowdhury** can be reached on **571-272-2287**. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
